THE MIDLEVEL PRACTITIONER MOVES FORWARD:
IMPLICATIONS OF CODA ACCREDITATION STANDARDS FOR DENTAL THERAPY

Frank Catalano, DMD
Professor, Department of Community Dentistry and Behavioral Science
Director, Southeast Center for Research to Reduce Disparities in Oral Health
University of Florida College of Dentistry
Chair, Board of Directors, Oral Health America

American Association for Community Dental Programs,
April, 2016, Cincinnati, OHIO
Previously presented at Kellogg Convening, Portland, Oregon, December, 2015

My Charge: A dental educator’s perspective of the significance of the CODA decision to develop, adopt and implement dental therapy education standards.

Presentation represents my own personal views and are not necessarily the views of the University of Florida College of Dentistry or the other organizations I work with.

Kellogg Convening, Portland, Oregon, December 2015
Describe how CODA Accreditation of dental therapy educational programs impacts dental and dental hygienist education and the potential opportunities the decision may create for partners to engage academic dental and dental hygiene education institutions?

Kellogg Convening, Portland, Oregon, December 2015

OUTLINE

1. Dental Therapists will be members of dental teams in the future. Let’s move on!

2. Implications for dental hygiene education.

3. Implications for dental education.

4. Opportunities for the future, including a MODEST PROPOSAL.

Kellogg Convening, Portland, Oregon, December 2015
1. Dental Therapists will be members of dental teams in the future.

   In my opinion, this action by CODA is
   THE CRITICAL NEXT STEP-
   THE WATERSHED MOMENT-
   in advancing the implementation of dental
   therapy programs across the US and improving
   access to quality oral health care for many
   underserved patients.

   Kellogg Convening, Portland, Oregon, December 2015
1. Dental Therapists will be members of dental teams in the future.

In the short term, CODA accreditation standards will assist the three states where dental therapy programs are already legal—Alaska, Minnesota and Maine—to become accredited nationally. This will eventually lead to flexibility and mobility for dental therapists across the country.

Kellogg Convening, Portland, Oregon, December 2015

In addition, CODA accreditation will hopefully bring clarity and some standardization to the various models being developed across the country. I am very concerned that too many DIFFERENT models across the country will only lead to failure of the movement.

Kellogg Convening, Portland, Oregon, December 2015
1. Dental Therapists will be members of dental teams in the future.

In the longer term, CODA accreditation standards will provide guidance and affirmation to policy makers, funders, insurers, dentists, dental hygienists and educators in the 18 states that are currently considering implementation of dental therapy programs to improve access to care and overall oral health for underserved residents.

Kellogg Convening, Portland, Oregon, December 2015

1. Dental Therapists will be members of dental teams in the future.

Finally, CODA accreditation may provide impetus for other states who have not yet considered dental therapists as a member of the oral health care team.

Kellogg Convening, Portland, Oregon, December 2015
1. Dental Therapists will be members of dental teams in the future. Where will these new members of the dental team be working?

- Private Practice
- Federally Qualified Community Health Centers
- County Health Departments
- School based clinics
- Rural/isolated communities
- Non-profit safety net clinics
- Corporate dentistry models
- Primary Care Medical Practices/Health Homes
- Hospital settings, Emergency Departments??
- Independent practice??
- Prisons
- Military
- Long Term Care Facilities
- Where else?? With teledentistry, the opportunities are endless

2. Implications for dental hygiene education

While my original thoughts were that advocates of dental therapy should have focused on the pediatric dental therapist, I see the CODA standards as a foundation for a dental hygiene based dental therapist educated in a 3 year certificate or a 4 year degree program.

And I know some of my friends in this room are not happy with that statement.
2. Implications for dental hygiene education

My Bias- I am very concerned about degree creep. Does requiring a bachelor’s degree for a traditional dental hygienist make a better dental hygienist or does it just raise costs of care?

Kellogg Convening, Portland, Oregon, December 2015

I see the current six (4+2) year model in Minnesota- the Advanced Dental Therapist- as simply too long but also I support it as a short-term, evolutionary career ladder step for current dental hygienists that should be phased out as new 3-4 year models, linked to the CODA standards and combining dental hygiene and therapy, evolve.

Kellogg Convening, Portland, Oregon, December 2015
2. Implications for dental hygiene education

The success of the Alaska model of dental therapy is based somewhat on therapists having a strong link to and a sense of cultural competency for the local Alaska natives.

The dental hygiene profession currently does not have the racial, ethnic, geographic and socioeconomic diversity of the current and future patient mix in the US. Not even close!

Kellogg Convening, Portland, Oregon, December 2015
2. Implications for dental hygiene education

The real opportunities for advancement of dental therapy programs will be in community and state colleges that house dental hygiene programs.

Usually have the infrastructure, knowledge and culture to work with non-traditional students. For example, military hygienists, EFDAs, and CDAs could be eligible for advanced standing to some level.
3. Implications for dental education

While dentistry has made some progress in enhancing the diversity of the workforce over past few decades, we need to do a better job.

More skills in communication, cultural competency, motivational interviewing, working with diverse populations, evidence based dentistry and management of a dental team.

And as an aside, more social justice.

Kellogg Convening, Portland, Oregon, December 2015

3. Implications for dental education

More critical thinking skills in dealing with complex patient needs.

More technical competence in treatment of complex dental needs of patients.

More biomedical knowledge and an ability to have better management of medically complex patients and better integration/comfort with medicine.

Kellogg Convening, Portland, Oregon, December 2015
Why am I emphasizing this issue of diversity and cultural competency of workforce?

D) Dentists who are Medicaid Providers are more altruistic than non-Providers (McKernan, SC, Reynolds, JC, Momany, ET, Kuthy RA Kateeb, ET, Adrianse, NB Damiano, PC, The relationship between altruistic attitudes and dentists’ Medicaid participation, JADA 146 1:31-41, January, 2015))

4. OPPORTUNITIES FOR THE FUTURE:

Placement of dental therapy students in FQHCs and other safety net settings during their educational programs, similar to what we do now in dental education.
4. OPPORTUNITIES FOR THE FUTURE:

Dentists, dental hygienists and dental therapists need to learn to play nicely in the sandbox.

It is imperative that dental therapy students learn in environments that include dentists and dental hygienists, and vice-versa.

I WOULD LOOK FOR COLLABORATIVE OPPORTUNITIES WITH ACADEMIC HEALTH CENTERS THAT HOUSE BOTH A DENTAL SCHOOL AND A DENTAL HYGIENE EDUCATIONAL PROGRAM. OR AT LEAST A STRONG AFFILIATION WITH A DENTAL HYGIENE EDUCATIONAL PROGRAM.

---

College of Dentistry

Kellogg Convening, Portland, Oregon, December 2015

---

4. OPPORTUNITIES FOR THE FUTURE:

Linking with dental schools

Why will there a reluctance on the part of many dental schools to do this, even if passed by the state legislature.

- Finances, space, faculty
- Opposition from traditional faculty
- Alumni opposition
- Organized dentistry opposition

-----------------------------------------------

Seek support of public health/community dentistry

---

College of Dentistry

Kellogg Convening, Portland, Oregon, December 2015
4. OPPORTUNITIES FOR THE FUTURE:

Delta Dental of Colorado announced the launch of the Colorado Medical—Dental (CO MDI) Project. This five-year initiative involves the placement of dental hygienists (SUBSTITUTE DENTAL THERAPISTS) in 17 Colorado primary care medical clinics in an effort to increase access to preventive (AND RESTORATIVE) dental health services.

Kellogg Convening, Portland, Oregon, December 2015

4. OPPORTUNITIES FOR THE FUTURE:

Dental Therapists are consistent with the key goals of the Institute for Health Innovation Triple Aim

Improve the patient care experience
Improve the health of the public
Lower the per capita costs of health care

One key foundation of the Triple Aim Cost Goal is to use the lowest cost provider to provide services that they are trained to do safely and effectively.

Kellogg Convening, Portland, Oregon, December 2015
4. Opportunities for the future

A Modest Proposal for
An Integrated Model of Change

THE NETHERLANDS

Jerković-Ćosić, K. , The relation between profession development and job (re)design: the case of dental hygiene in the Netherlands
Jerkovic-Cosic, K., personal communication

Kellogg Convening, Portland, Oregon, December 2015
The Netherlands Experiment
Changes in Dental Hygiene Education & Practice

1. Hygienists must be capable of coping with problems and analyze, think and act methodically, perform medical screenings.

2. Increased education by a year from 3 to 4 years with university Bachelor’s degree.

3. Simple restorative skills, more nontechnical skills such as communicative and team skills.

4. Can work independently, without need for referral by a dentist. However, the reality is that more dental hygienists joined dentists in team approaches to care.

5. There are continuing efforts to make dental hygienists more independent but the reality is more are joining dentist lead teams.

Kellogg Convening, Portland, Oregon, December 2015
The Netherlands Experiment
Changes in Dental Hygiene Education & Practice

I think the CODA standards can/should be the basis for this four year degree model of dental hygiene education with added dental therapy skills.

Kellogg Convening, Portland, Oregon, December 2015

The Netherlands Experiment
Changes in Dental Education & Practice

1. Education lengthened to six years/ new content!

2. The main task of the dentist is focused on general diagnosis and the coordination of a patient’s care and treatment by dentist and team/dental hygienist and dental preventive assistant.

Kellogg Convening, Portland, Oregon, December 2015
The Netherlands Experiment
Changes in Dental Education & Practice

3. More biomedical knowledge to manage to better manage medically complex patients and better integration with medicine.

4. More dental specialty education to better manage more complex dental patients rather than referring.

Kellogg Convening, Portland, Oregon, December 2015

4. Challenges for the future

Dentist lead teams (YES) versus Independent Practice (ONLY IN MINNESOTA)?

Licensure (NO) versus Certification (YES)?

Can we really reduce costs? If DTs cost less to educate and less to employ, the answer has to be yes. We cannot allow this to become a profit center for the dentist!

Kellogg Convening, Portland, Oregon, December 2015
Bottom line

Dental therapists are here to stay - get over it
Lots of opportunities
Lots of questions - how can therapists help increase access and reduce costs
Biggest potential opportunities are in dental hygiene education and practice
Dentists should be for more complex patients

THANKS AND QUESTIONS

W. K. Kellogg Foundation and Community Catalyst for inviting me and for their perseverance and bravery in promoting this important approach to improving access to quality oral health care and for reminding us this is a social justice issue.

Colleagues who shared information with me about this presentation including David Jordan, David Nash, Allen Hindin, Steven Krauss and especially Katerina Jerković-Ćosić from the Netherlands.
